Evaluation of Procedural Steps

Rate using the following scale

- N = Not observed
- D = Development required
- S = Satisfactory (no intervention required)

Date					
Ruling out history of deep venous thrombosis before saphenectomy					
Identification of correct incision site					
Knowledge of the anatomy					
Atraumatic dissection of the vein					
Control of vein quality					
Correct dissection and clipping of the side branches					
Atraumatic removal of the graft					
Checks the graft for leakage					
Safe handover to the scrub nurse					
Hemostasis, standard wound closure					
Level of difficulty (low, medium or high)					

Final Evaluation of Performance

Insufficient evidence observed to support a summary judgment	
Unable to perform the procedure or part observed, under supervision	
Able to perform the procedure, or part observed, under supervision	
Able to perform the procedure with minimum supervision (needed occasional help)	
Competent to perform the procedure unsupervised (could deal with complications that arose)	

Comments of the Assessor
